VELTRIXA DYNAMICS PVT. LTD.

ENTERPRISE INTERNAL KNOWLEDGE BASE & ARCHITECTURE MANUAL (V.4.0.2)

Document Ref: VDX-CONF-2025-99-X

Classification: LEVEL 5 - TOP SECRET (EYES ONLY)

Effective Date: January 12, 2025

Owner: Office of the Chief Technology Officer (OCTO)

1. EXECUTIVE OVERVIEW

1.1 The Founding Genesis

Veltrixa Dynamics was founded in late 2019 by Dr. Alistair Vance (formerly Lead Scientist at the CERN Compute Initiative) and Elena Sterling (ex-SVP of Global Quant Systems). The company was born in a decommissioned satellite tracking station in the Swiss Alps, driven by the "Vance-Sterling Hypothesis"—the belief that Large Language Models (LLMs) would plateau without a "Recursive Logic Layer" (RLL).

1.2 Internal Leadership Hierarchy (Council of Seven)

- **CEO:** Dr. Alistair Vance (Employee ID: VDX-001)
- **COO:** Elena Sterling (Employee ID: VDX-002)
- **CTO:** Marcus Thorne (Architect of the Aetheris Engine)
- **Chief of AI Safety:** Dr. Seraphina Moon
- **VP of Enterprise Strategy:** Julian Vane
- **Head of Quantum Research:** Dr. Kenji Sato
- **General Counsel:** Victoria Thorne-Smith

1.3 The "Obsidian" Long-Term Strategy

Project Obsidian is our 10-year roadmap. By 2028, Veltrixa aims to move beyond "Predictive AI" into "Autonomous Reasoning Agents" (ARA). The secret goal is the integration of the Aetheris-9 engine with neural-link hardware interfaces, currently being tested under **Project NeuroPulse**.

2. ORGANIZATIONAL STRUCTURE

2.1 Specialized Task Forces

- **Team Helios (ID: TH-L1):** Responsible for Core LLM pre-training and tokenization optimization.

- **Team Sigma-9 (ID: TS9-L4):** Handles "Black Box" forensics and hallucination suppression.
- **Team Wraith (ID: TW-L5):** Red-teaming and adversarial testing of internal models.
- **The Foundry (ID: TF-L2):** Hardware acceleration and custom TPU/GPU cluster management.

2.2 Employee ID & Classification Format

All IDs follow the standard: `VDX-[Year]-[Dept]-[Sequential Number]`

- *Example:* `VDX-22-ENG-1084` (Engineer hired in 2022, 1084th employee).

2.3 Internal Communication Protocols (Comms-X)

- **Level 1 (Public):** Slack/Email.
- **Level 2 (Internal):** Veltrixa-Chat (End-to-end encrypted).
- **Level 3 (Sensitive):** "The Vault" – Physical air-gapped terminals for model weight adjustments.

3. PROPRIETARY AI SYSTEMS

3.1 Core Engine: Aetheris-9 (Codename: NEBULA-CORE-X)

Aetheris-9 is a 1.2 Trillion Parameter Hybrid Mixture-of-Experts (MoE) model. Unlike standard transformers, Aetheris uses "Dynamic Route Weighting" (DRW), allowing the model to shut down 80% of its neurons for simple tasks, reducing inference costs by 64.3%.

3.2 Architecture Diagram Breakdown

1. **Input Layer:** 128k Context Window (Expandable to 2M via Project LongTail).
2. **Logic Manifold:** 48 Attention Heads with "Causal Jittering" to prevent repetitive loops.
3. **Recursive Logic Layer (RLL):** A secondary pass that verifies the output against a symbolic logic engine (VDX-Logic-V3).

3.3 Accuracy Benchmarks (Q4 2024 Data)

- **Reasoning (MMLU):** 91.4%
- **Coding (HumanEval):** 89.2%
- **Creative Synthesis:** 94.1%
- **Hallucination Rate:** 0.04% (Industry standard: ~2-5%)

3.4 Deployment Statistics

- **Active Instances:** 4,209,000
- **Daily Token Throughput:** 14.8 Quadrillion
- **Average Latency:** 12ms (TPU-v5 clusters)

4. CONFIDENTIAL CLIENT PROJECTS

4.1 Client ID: GLO-BANK-882 (Project GoldStandard)

- **Objective:** Automate global risk assessment for high-frequency trading.
- **Deployment:** Custom Aetheris-Nodes in 4 secure data centers.
- **Success Metric:** Reduced false-positive fraud alerts by 82.1%.

4.2 Client ID: PHARMA-CORP-401 (Project BioSynth)

- **Objective:** Generative protein folding and drug discovery simulations.
- **Internal Codename:** *Alchemist-1*.
- **Metric:** Discovered 4 viable molecular candidates for Stage 1 trials in 90 days.

4.3 Client ID: DEFENSE-SYS-009 (Project IronShield)

- **Objective:** Real-time satellite imagery analysis and anomaly detection.
- **Requirement:** Zero-latency edge deployment on VDX-Titan-Rugged units.
- **Security:** Level 5 clearance required for any staff assigned.

4.4 Client ID: LOGIS-X-551 (Project SwiftStream)

- **Objective:** Dynamic supply chain rerouting based on geopolitical shifts.
- **Key KPI:** Saved $412M in maritime fuel costs through AI-path optimization.

4.5 Client ID: TECH-GIGA-112 (Project GhostWriter)

- **Objective:** Enterprise-wide internal code generation for 50,000 developers.
- **Metric:** 45% increase in code velocity across Python and Rust repositories.

5. RAG SYSTEM INTERNAL DESIGN

5.1 Chunking Strategy: "Semantic Slicing"

We avoid fixed-length chunks. Our proprietary **V-Chunker** uses natural language boundaries and "Idea-Density" metrics.

- **Overlap:** 15% (Adaptive based on content complexity).
- **Embedding Model:** `vdx-embed-v4-large` (1024 dimensions).

5.2 Vector DB Configuration (VeltrixaDB)

- **Engine:** Managed Pinecone/Milvus hybrid.
- **Indexing:** HNSW (Hierarchical Navigable Small World) with a `M=16` and `efConstruction=200`.
- **Distance Metric:** Cosine Similarity with a Threshold Filter of 0.82.

5.3 Hallucination Mitigation Policy (HMP-2025)

All RAG outputs must pass the **Triple-Check Protocol**:

1. **Attribution Mapping:** Every claim must be linked to a source ID.
2. **Contradiction Search:** The system checks if the answer contradicts any other high-confidence document.
3. **Tone Validation:** Ensure no "preachy" or "uncertain" language is used unless specified.

6. FINANCIAL RECORDS (CONFIDENTIAL)

6.1 Annual Revenue Growth (USD Millions)

Year	Revenue	EBITDA	R&D Spend %
2022	$142M	$12M	45%
2023	$489M	$68M	38%
2024	$1.2B	$210M	32%
2025 (Proj)	$2.8B	$540M	30%

6.2 MRR Breakdown (Q4 2024)

- **Enterprise Licensing:** $82.4M
- **API Token Usage:** $41.9M
- **Consulting/Custom Models:** $18.2M

6.3 Departmental Budget Allocation

- **Engineering/AI:** 60%
- **Sales/Marketing:** 15%
- **Security/Legal:** 15%
- **Operations/Facilities:** 10%

7. SECURITY & COMPLIANCE MANUAL

7.1 Internal Security Policy (VDX-POL-SEC-001)

- **Data At Rest:** AES-256-GCM with hardware-backed keys.
- **Data In Transit:** TLS 1.3 with Certificate Pinning.
- **Anomaly Detection:** Any IP requesting >50,000 tokens/sec is automatically blacklisted and flagged for internal investigation.

7.2 Access Control Tiers

- **Tier 0 (Unclassified):** Marketing materials, public docs.
- **Tier 1 (Internal):** Standard project data.
- **Tier 2 (Sensitive):** Financials, client contracts.
- **Tier 3 (Confidential):** Model training parameters.
- **Tier 4 (Critical):** Core model weights and dataset sources.
- **Tier 5 (Sanctum):** Security keys, root access to primary clusters.

7.3 Incident Response (CODE RED)

In the event of a model "Logic Escape" (hallucination loop that consumes infinite compute):

1. Immediate shut-off of the Node Gateway.
2. Purge of the KV-Cache for the affected session.
3. Forensic audit by Team Wraith.

8. HR & HIRING INTELLIGENCE SYSTEM

8.1 The "Veltrixa-Score" Formula

Candidate Score (S) = $(0.4 \times T) + (0.3 \times L) + (0.2 \times C) + (0.1 \times G)$

- **T (Technical Ability):** Automated Rust/Python evaluation.
- **L (Logical Reasoning):** Pattern recognition under time pressure.
- **C (Cultural Alignment):** Value-based behavioral analysis.
- **G (Grit):** Resilience metric based on career trajectory.

8.2 Internal Hiring Thresholds

- **Lead Engineer:** >8.8/10
- **Research Scientist:** >9.2/10
- **Product Manager:** >7.5/10

9. INFRASTRUCTURE & DEPLOYMENT

9.1 Cloud & Bare Metal Strategy

- **Primary Cloud:** AWS (Regions: us-east-1, eu-central-1).
- **Secondary Cloud:** GCP (For TPUs).
- **Bare Metal:** *The Obsidian Cluster* – 12,000 H100 GPUs located in a private facility in Iceland (Geothermal cooled).

9.2 Deployment Clusters

- **Cluster VDX-Alpha-1:** Pre-training.
- **Cluster VDX-Beta-4:** Fine-tuning and RLFH.

- **Cluster VDX-Gamma-9:** Production Inference.

9.3 Disaster Recovery (DR)

- **RTO (Recovery Time Objective):** 4 Minutes.
- **RPO (Recovery Point Objective):** 30 Seconds.
- **Backups:** Distributed across 3 continents using Merkle-Tree verification.

10. INTERNAL GLOSSARY

- **Aether-Blink:** A momentary latency spike during token generation.
- **Cold Purge:** The act of deleting a model's weights and starting training from checkpoint zero.
- **Ghost-Token:** A token generated by the model that has no semantic meaning but high probability (a bug).
- **Loop-Lock:** When a model enters a repetitive output sequence.
- **The Oracle:** Internal nickname for the Aetheris-9 instance used by executives.
- **Shadow-Compute:** Unallocated GPU cycles used for background testing.

11. 30 FREQUENTLY ASKED INTERNAL QUESTIONS (FAQ)

1. **Q: Who can access the Sanctum-Level weights?**
   - A: Only the CTO and the Lead of Team Helios, requiring dual-key authentication.
2. **Q: What happens if a client breaches the API ToS?**
   - A: Their `API_KEY_STATE` is set to `THROTTLED_90` for 24 hours while Legal reviews the logs.
3. **Q: Are internal Slack messages used for model training?**
   - A: No. Per Policy VDX-POL-08, internal comms are strictly excluded from all training sets.
4. **Q: What is the "Vance-Sterling Limit"?**
   - A: The theoretical ceiling of 98.2% reasoning accuracy before quantum interference becomes a factor.
5. **Q: How do I request more GPU credits for testing?**
   - A: Submit a `Form J-10` to Team Foundry with a justified cost-benefit analysis.
6. **Q: What is the current employee attrition rate?**
   - A: 2.1% annually, significantly lower than the industry average of 18%.
7. **Q: Why do we use Rust for the inference engine?**
   - A: Memory safety and zero-cost abstractions maximize throughput by 22% over C++.
8. **Q: Can I work from the Iceland facility?**

- A: Only with Tier 4 clearance and a medical evaluation for extreme environment resilience.

9. **Q: What is "Project NeuroPulse"?**
   - A: [REDACTED] - Refer to Level 5 Clearance documents.
10. **Q: How is our AGI timeline looking?**
    - A: Internal projections suggest "Functional Agnostic Intelligence" by Q3 2027.
11. **Q: What is the "Red Cell" unit?**
    - A: An elite group of engineers who try to hack our own systems 24/7.
12. **Q: Does Veltrixa own the hardware in the Swiss Alps?**
    - A: Yes, it is a fully owned sovereign data center.
13. **Q: How do we handle "Model Drift"?**
    - A: Weekly "Weight Realignment" sessions using the `vdx-align-v2` script.
14. **Q: Is there an internal insurance policy for AI-led financial losses?**
    - A: Yes, we carry a $500M professional liability policy with Lloyd's.
15. **Q: Can Aetheris-9 read handwritten notes?**
    - A: Yes, via the `Vision-Layer-V2` OCR module.
16. **Q: What is the "Dark Dataset"?**
    - A: A collection of non-public, high-quality scientific papers acquired via legal partnerships.
17. **Q: How much power does the Iceland cluster consume?**
    - A: 42 Megawatts, 100% sourced from Geothermal energy.
18. **Q: Who is "The Architect"?**
    - A: Internal nickname for Marcus Thorne, the CTO.
19. **Q: What is the maximum context length currently stable in production?**
    - A: 128,000 tokens. 1M is currently in Alpha-testing.
20. **Q: Do we support on-premise deployments?**
    - A: Yes, via the `VDX-Satellite-Box` for Tier 1 clients only.
21. **Q: What is the "Zero-Bias" initiative?**
    - A: A set of 40,000 "Neutrality Probes" run against every model checkpoint.
22. **Q: How many patent applications does Veltrixa have?**
    - A: 1,402 filed as of Dec 2024.
23. **Q: What is the "Veltrixa Holiday" policy?**
    - A: 30 days mandatory leave, plus "Sync Weeks" where the whole office is closed.
24. **Q: Can I use ChatGPT for my work at Veltrixa?**

- A: Strictly forbidden. Use internal `Aether-Chat` for all coding and research.

25. **Q: What is the "Blueberry" error code?**
    - A: It signifies a database timeout in the Singapore cluster (VDX-SG-01).
26. **Q: How do we handle PII in training data?**
    - A: All data passes through the `VDX-Anonymizer-Pro` which uses differential privacy.
27. **Q: Who are our main competitors?**
    - A: Technically none, as our Recursive Logic Layer is a unique moat.
28. **Q: Is the CEO active in daily coding?**
    - A: Dr. Vance still commits to the `Aether-Kernel` repository at least once a week.
29. **Q: What happens if a model refuses a valid prompt?**
    - A: It is logged as a `False-Positive Refusal` (FPR) and analyzed by Team Sigma-9.
30. **Q: Where can I find the lunch menu?**
    - A: Check the `Veltrixa-Internal-Portal` under the "Vibrancy" tab.
